### DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 2, and 6-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dascher et al (1993, Microbial Pathogenesis 15:455-467), newly cited, in view of either Storey et al (J.Gen Microbiol 139:2621-2626) or Girjes et al (1994, Gene 138:139-142), of record.

Dascher et al (1993) teaches the expression of a *C. psittaci* MOMP in *E. coli*, wherein the MOMP is substantially purified via one- and two-dimensional gel electrophoresis. See the abstract on page 455 and Fig. 4. However, the reference does not particularly exemplify the sequences of the MOMP. Both Storey et al and Girjes et al teach the DNA sequences of the MOMP gene respectively from *C. pneumoniae* and *Chlamydia psittaci*. See page 2623 of Storey et al and page 140 of Girjes et al (1994). It would have been prima facie obvious to one of ordinary skill in the art at the time the invention was made to substitute the DNA sequences of the MOMP gene of Storey et al or Girjes et al in the expression system and purification of MOMP of Dascher et al (1993), since Dascher et al particularly teaches that a recombinant system that ensures proper MOMP cellular topology would facilitate the understanding of the multiple functions of MOMP with the reasonable expectation of successful expression of the

MOMP for further understanding of their role as a protective antigen, an adhesion or a porin, as taught by the reference. See page 456 of Dascher et al.
